

2nd Gymnasium of Kaisariani - Report of innovative proposals for next school year

During our participation in the European program Erasmus+, 'From our roots to the future', we considered very useful some good practices that were applied. Our school, during the implementation of the program, benefited from the implementation of several good practices.

Specifically, with the students' participation in the ecological campaign of our school (repairing a municipal tap, using recyclable packaging for shopping etc) that took place, our students became aware of environmental issues and motivated the local community. Also, through the creation of an ecological student action group, we succeeded in creating an atmosphere of cooperation in the school community. At the same time, through the collaborative workshops, our students acquired more skills and realized that they are members of the wider European society. In addition, our participation in this program increased motivation and satisfaction among students and teachers in their everyday work.

Aiming at the best and most efficient teaching and pedagogical operation of our school, the Erasmus+ commission of 2nd gymnasium of Kaisariani proposes for next school year the application of the following innovative proposals.

- ✓ The participation of students in European and other programs aimed at their ecological, cultural and social awareness.

Erasmus+

- ✓ Participation of students in sporting events of the city (e.g. Marathon) and in National and European cultural competitions.

- ✓ The application of innovative teaching methods with the use of new technologies and the active participation of students. .

- ✓ Visits to areas of ecological and cultural interest outside the school.

- ✓ In some cases the teaching could take place outside the school in a green area.

- ✓ The close cooperation of our school with the local community and with cultural and other institutions.

- ✓ Creating student groups actions (e.g. group for urban environmental protection, forest protection, recycling etc.).

- ✓ Utilization of art, actions related to the artistic expression of students.
